

ABSTRACT

The present invention provides An acrylic resin comprising a repeating unit derived from

- 5 (i) a methacrylate of the formula (1), (ii) a repeating unit derived from a monomer having at least two (meth)acryloyl groups of the formula (2)

- and (iii) a repeating unit derived from a monomer containing at least one polar functional group selected from the group consisting of carboxyl, hydroxyl, amide, epoxy, formyl, oxetanyl, amino and isocyanate, and
 10 containing olefinic double bond.

- The present invention also provides an adhesive composition obtained by mixing (a) the acrylic resin above and (b) at least one selected from the group consisting of a hardener and a silane-based compound; an
 15 optical laminate film comprising (A) an optical film and (B) the adhesive composition layer above, and (I) the optical laminate film above and (II) a glass material layer.
